SCIP Information Statement 2021/22

Classification: Public

Amendment 2018/851/EU of the Waste Framework Directive 2008/98/EC regulating the notification of products with hazardous substances in the recently introduced SCIP Database

Dear Customer,

the updated Waste Framework Directive demands all manufacturer, distributor and importer of products in the European Union to upload information on articles and complex objects (products) containing so called Substances of Very High Concern (SVHC) in the SCIP Database created by the European Chemical Agency. SVHCs are defined in the Candidate List Table of the EU REACH Regulation 1907/2006.

In accordance with the REACH Regulation, Article 33, and to the best of our knowledge based on information received from our suppliers and our own product data we herewith inform you that we supply certain products of which components – or the products themselves – contain Lead (Pb / CAS-No 7439-92-1) as a minor addition to the alloy they are made of. We have uploaded relevant product information into the SCIP Database accordingly.

As the SCIP Database is not yet open to the public, we would like to inform you about the product information we have uploaded into the SCIP Database up to today. We will continue to upload further dossiers in the next weeks and update this letter accordingly.

In case of any queries concerning this information letter please don't hesitate in contacting us: materialcompliance.de@dormakaba.com.

Yours faithfully

dormakaba International Holding AG

Stephanie Ossenbach-Keller
Senior Manager Corporate Sustainability
